

Fungicides for Foliar Disease Management

Jeff Miller

Early Blight/Brown Spot Management

- Maintain adequate fertility.
- Use fungicides preventatively.
 - Use premium products early in the season.
 - Rotate products with different modes of action.
 - A back to back application of one mode of action may be most effective.
 - Then rotate to another chemistry.
 - No more than 2 of one group in southern Idaho!
- Tank mix premium products with a protectant or another mode of action.
- Allow tuber skins to mature prior to harvest.

Early blight
Alternaria solani
