

2

Multiple Fertilizers

- Five different fertilizers applied at one time.
- Application by fertigation.
- "Use it up."
 - No effort was made to determine a rate
 - $\boldsymbol{\mathsf{-}}$ Mixture bubbled with spilled on the soil

3

Case Study #2

- Omega + Amistar Top + Buckhorn = leaf burn
 - Omega + Amistar Top = no burn
 - Omega + Buckhorn = no burn
 - Amistar Top + Buckhorn = no burn
- Who is to blame?

4

6

Case Study #3

- Early August application
 - Fungicide for disease control
 - Foliar micronutrient fertilizer
 - Jar test showed incompatibility
- Advice was given to leave out the fungicide
 - Which would provide more value?

Case Study #4

- Recommendation to mix chlorothalonil with mancozeb.
- Both products are broad spectrum protectants
- Mixing recommended for products with a narrow mode of action
- This recommendation would have cost extra money without providing any additional benefit just use one!
